- 1. A multi-tool device comprising:
- a single housing, said housing comprising a plurality of compartments;
- a hatchet having a body including cutting edge on one end and a hammer head on a distal end, said hatchet being rotatably mounted in a first one of said compartments of said housing at a first end of said housing; and
 - a flashlight disposed in a second one of said compartments of said housing at a second end of said housing distal to said first end.
 - 2. The multi-tool device as set forth in claim 1, further comprising:
 - a digging tool rotatably mounted on the body of said hatchet.
 - 3. The multi-tool device as set forth in claim 1, further comprising:
 - a first locking button and a second locking button, each being disposed at said first end of said housing;
 - said first locking button locking said hatchet in a closed position in said first one of said compartments, and when pressed by a user, releases said hatchet to allow said user to rotate said hatchet and rotatably extract said cutting edge from said first one of said compartments; and
 - said second locking button locking said hatchet in an open position when said hatchet is rotated 90 degrees.

4. The multi-tool device as set forth in claim 3, further comprising: a digging tool rotatably mounted on the body of said hatchet, said digging tool being 2 limited to a 90 degree rotation with respect to the body of said hatchet by the body of said hatchet. 3 5. The multi-tool device as set forth in claim 3, further comprising: 1 a digging tool rotatably mounted on the body of said hatchet, said digging tool being 2 limited to a 90 degree rotation with respect to the body of said hatchet by said hammer head. 3 1 6. The multi-tool device as set forth in claim 1, further comprising: a knife disposed in a third one of said compartments of said housing at said second end of 2 said housing and on an opposite side of said housing from said flashlight. 3 7. The multi-tool device as set forth in claim 1, further comprising: 1 a saw disposed in a third one of said compartments of said housing at said second end of 2 said housing and on an opposite side of said housing from said flashlight. 3 8. The multi-tool device as set forth in claim 6, further comprising: 1 2 a saw disposed in a fourth one of said compartments of said housing at said second end of said housing and adjacent to said knife. 3

9. The multi-tool device as set forth in claim 1, further comprising:

- a compass disposed in a third one of said compartments of said housing at a position between said first and second ends of said housing and on a same side of said housing as said flashlight.
 - 10. The multi-tool device as set forth in claim 11, said third one of said compartments being a storage compartment and said compass forming a lid for said storage compartment.
 - 11. The multi-tool device as set forth in claim 1, said flashlight having a rotatable head and interchangeable lens.
 - 12. The multi-tool device as set forth in claim 1, said housing further comprising:
 - a structural support frame to which said hatchet is rotatably mounted, said structural support frame adding structural strength the said housing.
 - 13. The multi-tool device as set forth in claim 1, further comprising a storage compartment in the body of said hatchet.
 - 14. The multi-tool device as set forth in claim 1, the body of said hatchet comprising a plurality of serrated teeth and a hooked portion for enabling said hatchet to be hooked over and grapple a tree limb for hanging said multi-tool device from said tree limb.

l	15. The multi-tool device as set forth in claim 14, further comprising:
2	a pulley rotatably mounted at a position between said first and second ends of said housing
3	for hoisting items when said hatchet is grappled to said tree limb.
1	16. A multi-tool device comprising:
2	a single housing, said housing comprising an elongated body having a plurality of
3	compartments;
4 .	at least one cutting tool removably mounted in a first one of said compartments of said
5	housing; and
6	a flashlight disposed in a second one of said compartments of said housing.
1	17. The multi-tool device as set forth in claim 16, further comprising:
2	a structural support frame disposed within the elongated body of said housing and adding
3	structural strength the said housing;
4	a hatchet having a body including cutting edge on one end and a hammer head on a distal
5	end, said hatchet being rotatably mounted to said structural support frame about a pivot point, said
6	hatchet being disposed withing in a third one of said compartments;
7	a digging tool rotatably mounted on the body of said hatchet about said pivot point, said
8	digging tool overlaying said third one of said compartments.

- 18. The multi-tool device as set forth in claim 17, further comprising:
- a first locking button and a second locking button, each being disposed at said first end of said housing;

said first locking button locking said hatchet in a closed position in said first one of said compartments, and when pressed by a user, releases said hatchet to allow said user to rotate said hatchet and rotatably extract said cutting from said first one of said compartments; and

said second locking button locking said hatchet in an open position when said hatchet is rotated 90 degrees.

19. A multi-tool device comprising:

- a single housing, said housing comprising an elongated body having a plurality of compartments;
- a structural support frame disposed within the elongated body of said housing and adding structural strength the said housing;
- a hatchet having a body including cutting edge on one end and a hammer head on a distal end, said hatchet being rotatably mounted to said structural support frame about a pivot point, said hatchet being disposed withing in a first one of said compartments of said housing at a first end of said housing;
- a digging tool rotatably mounted on the body of said hatchet about said pivot point, said digging tool overlaying said first one of said compartments; and
 - a cutting tool removably mounted in a second one of said compartments of said housing

at a second end of said housing distal to said first end.

ı

- 20. The multi-tool device as set forth in claim 19, further comprising:
- a flashlight disposed in a third one of said compartments of said housing at said second end
- of said housing and on an opposite side of said housing from said cutting tool.
